

Nanotechnnnology - a key driver for radical innovations

Nanotechnology is a Key Enabling Technology with promises for making solid contributions to the grand challenges of today, such as sufficient sustainable energy supply, supply of clean water, taking care of the elderly population and making cities ready for the globalization.

At INL, the Internatioal Iberian Nanotechnology Laboratory, we are implementing a full ecosystem for nanotechnology innovation and science. I will discuss about how nanotechnology could be of importance to bring added value to products and services. I will also review some areas of nanotechnology that recently has been deployed giving rise to radical innovation and business development.
